- a) IPv6
- b) hyperlinks
- c) URL; web servers
- d) get; post
- e) bottom tier, middle tier, top tier
- f) Android

Part (iii)

According to what we have learned from class, client-side programming technologies are used to build web pages and applications that are run on the client. For example, in the web browser on the users' device. Server-side programming technologies are used to build applications that respond to requests from client-side web browsers, such as searching the Internet, checking your bank-account balance, ordering a book from Amazon, bidding on an eBay auction, or ordering concert tickets, etc.
